Subject: Seaport Air Quality - comment

Khamly,

I received a copy of the Seaport Air Quality 2020 and Beyond Plan at the recent Port of Oakland Trucker Work Group Meeting on July 16th.

We at DockTime have tried to address the issue of congestion and pollution for more than two years now. I have personally met with many of your co workers to address the infrastructure and foundational issues that cause congestion and pollution at the Port, namely the inefficient allocation of trucking resources to the supply of containers.

We see a great deal of attention paid to peripheral issues related to truck traffic but no attention focused on the core issues of truck traffic.

Reducing truck traffic overall will have the greatest impact on improving air quality. If this is the stated goal of your project, I believe strongly that DockTime's plan can be a key component of your future strategic plans.

A little background. I am a 15 year inhabitant of a warehouse just off West Grand and Mandela Parkway. My goals are closely aligned with those with health and safety concerns from Port truck traffic. As a trucking veteran, I have visibility into the causes and the potential solutions that others may not necessarily have.

Please note that we are working closely with CCIG to occupy the new warehouse going into parcel MH - 1 for the next 15 years. We are invested and are investing in the Port of Oakland and the City of Oakland.

With that in mind, please note that reducing truck traffic overall is our view on how to best address the majority of the concerns brought up by your Air Quality Plan.

The Port of Oakland is our "Golden Goose". We should mine those golden eggs each day while providing value to all within the community. This includes the truckers, the shippers, the ocean carriers, the terminals, the residents of West Oakland, and the City of Oakland.

I would welcome an opportunity to share a deeper conversation into the issue should your schedule allow.

Best regards,

--
